Please know that by law, information collected pursuant to Section 313 of EPCRA (Emergency Planning and Community Right-to-Know Act) and which is housed in the Toxic Release Inventory (TRI) has to be made available to the public as part of EPA's "right-to-know" program. There are two main databases which house TRI data:

Envirofacts: http://www.epa.gov/enviro/
and
TRI Explorer: http://iaspub.epa.gov/triexplorer/tri_release.chemical

If you are interested in manipulating TRI data then I suggest you download a stand-alone program called TRI.NET.

http://www2.epa.gov/toxics-release-inventory-tri-program/download-trinet

Both these databases contain historical as well as current release and waste management information. The latest information available is for reporting year 2013, who's reports were due to EPA and the state on July 1, 2014.

If you are unfamiliar with using either of these databases, please find attached a user's guide to these web sites as well as other sites for accessing and utilizing TRI data.

Sincerely,
Mort Wakeland
